

Project title :Implementation Client Script & UI Policy

Phase 8: Project Demonstration Phase

1. Execution and Summary Overview :

The project successfully addresses the critical issue of data entry anomalies within the ServiceNow Incident management space.

By creating a collaborative system of declarative UI Policies and advanced Client Scripts, data parameters are checked instantly on the client side.

2. Business Benefits Realized

- Flawless Data Integration: High impact tickets are guaranteed to contain assignment records immediately upon entry.
- Operational Control: Crucial lifecycle tracking variables such as the Incident State cannot be bypassed using stealthy inline adjustments on list layouts.
- Enhanced Experience: Users get immediate feedback directly on the interface, without waiting for the server to process or reject pages.

The screenshot displays the ServiceNow Incident form for incident INC0008111. The form is titled "Incident - INC0008111" and includes a search bar and navigation tabs (All, Favorites, History, Workspaces, Admin). The form fields are as follows:

- Number:** INC0008111
- * Caller:** System Administrator
- Watch list:** [Add]
- * Short description:** ATF - Test1
- Opened:** 2019-07-22 14:04:57
- Closed:** [Empty]
- Urgency:** 3 - Low
- State:** In Progress

Below the form fields, there is a "Related Search Results" section. The "Comments (Customer visible)" section contains a text area and a "Post" button. The "Activities" section shows two activities:

- Activity 1:** System Administrator, Incident state: In Progress, was New. Field changes: 2020-09-27 22:59:38.
- Activity 2:** System Administrator, Impact: 3 - Low, Incident state: New, Opened by: System Administrator, Priority: 3 - Planning. Field changes: 2019-07-22 14:05:17.

At the bottom of the form, there are buttons for "Update", "Resolve", "Delete", and "Responses". The "Related Links" section is also visible.

3. Incident Form Implementation

In the Incident form, Client Scripts and UI Policies can be implemented to control fields such as Impact, Urgency, Priority, Assignment Group, and Assigned To

This helps ensure that users provide the required information while creating or updating incidents.

4. Project Objective

The main objective of this project is to implement Client Scripts and UI Policies in ServiceNow to automate form behavior, validate user inputs, control field properties, and improve the efficiency of the Incident Management process.

5. Expected Outcome

The expected outcome is a user-friendly Incident form where fields respond dynamically to user actions, required

information is properly validated, and unnecessary manual actions are reduced.

6. Conclusion

The implementation of Client Scripts and UI Policies provides an effective way to customize ServiceNow forms.

By combining client-side validation with dynamic field control, the system becomes more interactive, accurate, and user-friendly.
